Document Naming Procedure

Required form:

YYYYMMDD-DocumentContents,SURNAME,VX

Date – The document name should start with the date of distribution, in the form YYYMMDD. E.g. 20261102

Document contents – After the hyphen, the contents of the document should be described. This should be short and concise and highlight exactly what the document contains, utilising easily recognisable key words. E.g. EMGDataCollection, CompleteMATLABCode or SkillsMatrix

Surname – Author's surname to allow for easy traceability and allow for future follow up. E.g. WOOLLVEN

Version number – The version number should then be given in the form of a capitol V followed by the number of the version. E.g. V2

Easy to find document:

The dating convention helps to improve the retrievability of the document. As the dates are at the start, the documents will be in chronological order, allowing for easier identification of files. Additionally, 'document contents' will include key words describing the file in order to allow for file searches in the case where documents may be misplaced.

Version History Template:

Version	Date	Author	Summary of changes
0.1	YYYY-MM-DD	[Your name]	Initial draft written
0.2	YYYY-MM-DD	[Reviewer's name]	Reviewed and changes made
1.0	YYYY-MM-DD	[Approver's name]	Final version approved and released.

This table should be added to the end of all word documents to track the history of edits, who made them, and what changed, ensuring everyone works off the most accurate, up-to-date information.

Version History:

Version	Date	Author	Summary of changes
0.1	2026-11-02	Ellie Woollven	Initial draft written
0.2	2026-11-02	Dasha Botha	Reviewed and clarification added to ‘document contents’
1.0	2026-11-02	Dasha Botha	Final version approved and released.
